Progress Report 1

Project Name	YamuColombo - Colombo Bus Route Management System
Index No	130166P
Weekly Report No	*01*
Reporting period	*15-03-16 to 03-04-16*

Section 1: Activities and Progress

1.1 Implementation/ development progress

Feasibility study has been carried out and documented. It is determined that project is both financially and technically feasible. Then the project schedule was created. Currently the progress of the project is up to date with the schedule. It is scheduled according to the RUP model and now it is in the beginning of the elaboration iteration. Requirement gathering and analysing is performed. SRS is being implemented. Currently the information for the system such as bus route details are being gathered. Few of the user interfaces are designed, but should be improved.

1.2 Testing progress

As the main coding of the system has not started, testing of the system is not carried out yet.

1.3 Deviations from proposed architecture and design (if any)

So far the progress is according to the project proposal and the schedule. No alterations.

Section 2: Risks, Issues and Challenges

There's a risk in coming up with the best user friendly user interfaces. The design should be improve so that it is easy for anyone to get familiar with the system without much effort.

Section 3: Next Steps

Complete the software requirement analysis and come up with a good SRS.
Integrate the Google Map APIs to the system and perform testing.
Complete gathering information for the system.
